Aquatain

LIQUID POOL BLANKET

What is Aquatain?

Aquatain is a unique liquid silicone which spreads across the water surface, forming a very thin film that greatly reduces evaporation.

How much water do I lose to evaporation?

On average, a family swimming pool will lose more than 200 litres (50 gallons) to evaporation each day. This can increase to nearly 300 litres (75 gallons) during the warmer months.

How much water will Aquatain save?

Aquatain reduces evaporation loss by approximately 50% every day.

How often do I need to apply Aquatain?

Aquatain should be applied once per week at the rate of 50ml (about 2 fl.oz) for an average family pool.

Is Aquatain easy to apply to my swimming pool?

Yes, Aquatain is easy to apply by simply pouring the measured amount directly onto the water surface.

Will Aquatain upset the chemical balance in my swimming pool?

No, Aquatain does not affect the chemical balance in pool in any way.

How soon can I swim in my pool after Aquatain has been applied?

Right away, there is no waiting. You can swim directly after applying Aquatain.

Will Aquatain leave a film on my skin after swimming?

No, the amount of Aquatain applied to your pool is small and you will not notice any residue or film on your skin.

Is Aquatain safe for the environment?

Yes, Aquatain is safe and does not have any negative impacts on the environment.
