

FLOATING SUSTAINED RELEASE LARVICIDE FOR LONG TERM CONTROL OF MOSQUITO LARVAE. BIOLOGICAL MOSQUITO CONTROL

Kills them before they are too old to bite

Directions for use

Mosquito Dunks are formulated to release effective levels of BTI for a period of 30 days or more under typical environmental conditions. The floating of the dunks will ensure that the active material is released at the surface and will gradually settle to the bottom. These dunks may be used in all types of mosquito breeding sites near the household. To prevent dunks from being flushed out of certain treatment sites, they can be anchored using a string tied through the hole in the centre or staked in place.

Mosquito Dunks can also be used for pre-flood treatment. If the dunks are applied to dry areas which are known or suspected to become breeding sites when flooded, such as abandoned swimming pools, the dunks will float to the surface when flooding occurs and start releasing the active ingredient. Alternate wetting and drying will not reduce their effectiveness.

ACTIVE INGREDIENTS:

Bacillus Thuringiensis Berliner var, Israelensis, Serotype H - 14, Primary powder. 7000 ITU/mg

STORAGE & DISPOSAL

Storgae: Keep out of reach of children. Store in cool, dry, well - ventilated place. Reseal partially used container. Disposal: Do not reuse empty packaging material. Discard packaging according to local disposal regulations.

APPLICATION RATES

Mosquito Larvae: Flooded larvae breeding sites: Use one MOSQUITO DUNK per 10 sq metres of surface area of standing water, regardless of depth. In highly polluted water with a high organic content the application rate may be increased as much as four times the normal dose. Some larvae which hatch after dunk application may partially develop before dying. Allow a minimum of 48 hours for their control.

Pre-Flood Treatment: Use on MOSQUITO DUNK per 10 sq metres of surface which is in many outdoor applications near the household, such as bird baths, old tyres, rain barrels, abandoned or unused swimming pools, tree holes, roof gutters, flower pots or water gardens. Use according to the following table.

Surface Area	Up to 0.5	$m^2 = 0.5 - 2.5 m^2$	$2.5-10 \text{ m}^2$	>10 m
Quantity	1/4 Dunk	1/2 Dunk	l Dunk	1 Dunk/m ²
