

Mosquito problems start at home!

Wherever water collects

Enjoy the outside of your home all summer without pesky biting Mosquitoes!

Kill mosquitoes before they become old enough to bite

HOW MOSQUITOES GROW

Mosquitoes lay their eggs in water standing around the outside of your home. It could be water in bird baths, old tyres, rain barrels, streams, ponds, ditches, woodland pools, outdoor tubs, unused swimming pools, tree holes, flower pots, vases, roof gutters, or any other container around the household where water collects and remains for periods of time.

These eggs are very hardy and manage to live under almost all conditions. When the water temperature is right, the eggs hatch and become mosquito larvae which swim around eating and growing, bothering nobody. In about a week they become full-grown mosquitoes and fly out of the water looking for someone to bite.

Now you can kill mosquitoes around your home before they grow up and become nasty biters

HOW MOZZIE STOP WORKS

This patented product has been used by mosquito control professionals since 1983. Mozzie Stop dunks are made with B.t.i., a natural organic ingredient which kills mosquito larvae feeding on it. Dunks contain no poisonous chemicals and are harmless to other living things. They will continue to kill mosquito larvae for 30 days or longer and are completely biodegradable.

Once a month during the mosquito season, simply leave a floating MOZZIE STOP dunk in each place water collects around your home. Mosquito larvae will feed on them and be killed continuously. You will then be rid of biting adult mosquitoes for the entire season. Each dunk will take care of up to 10 square metres of water surface, regardless of depth. Any MOZZIE STOP dunks which dry out will start working again when they become wet. Unused dunks will remain active indefinitely.

NON-TOXIC TO HUMANS AND NON-TARGET ORGANISMS

® Mosquito Dunks is a registered trade mark of Summit Chemical Co. USA.

Throw **MOZZIE STOP** in them and mosquitoes won't have a chance

MOZZIE STOP

MOSQUITO DUNKS®

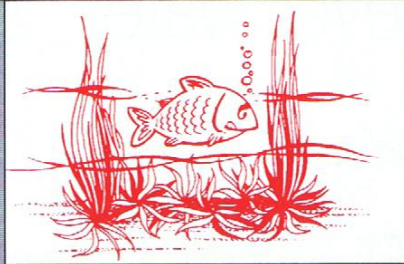

Mosquito problems start at home!

Wherever water collects

IN OLD BOTTLES AND CANS

IN OVERGROWN PONDS

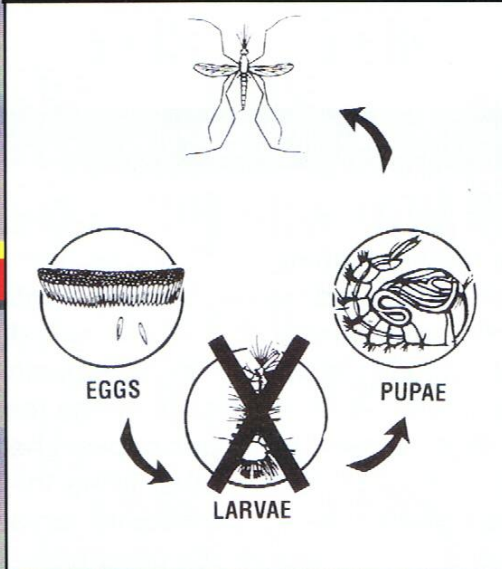

IN LEAF-CLOGGED GUTTERS

IN FLOWER POT DISHES

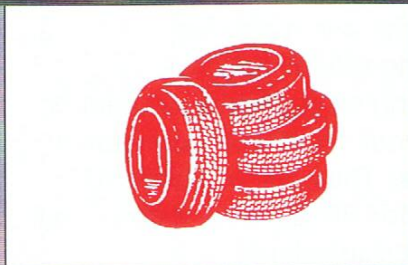

It takes about one week for a mosquito to grow from egg to adult

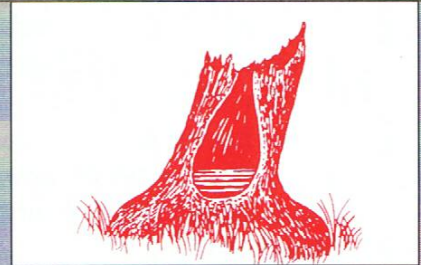

IN RAIN BARRELS

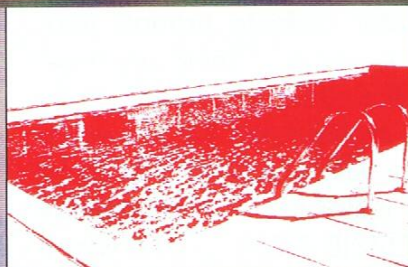

IN USED TYRES

IN TREE HOLES

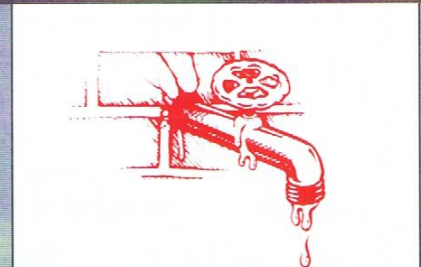

IN SWIMMING POOLS

IN BIRD BATHS

IN WATER FROM LEAKY FAUCETS

Don't give mosquitoes a chance!

Mosquitoes need water to breed and grow. It doesn't take much water and it doesn't take much time. So, almost anything that will hold water for one week or more can produce these pests. Many places around your home may be causing mosquito problems.

Throw **MOZZIE STOP** in them and mosquitoes won't have a chance
